

Diabetes Meal Plan

by Constance Brown-Riggs

Meal planning can be the most challenging aspect of diabetes self-management. Each day, you make critical choices that will impact your blood glucose levels and your health. Fortunately, diabetes can be more manageable when following a meal plan, and this week-long sample menu is a great place to start. Keep in mind that depending on your individual diabetes management goals, you may need to adjust the portions or types of food in the menu. – *Constance Brown-Riggs*

Tasty Tips

Always opt for whole grain foods instead of foods with refined flours.

Examples include brown rice, wild rice, rice cakes, whole grain breads and whole wheat pastas.

Whole grain foods contain more dietary fiber and convert more slowly to glucose.

Tasty Tips

Sugar alcohols include sorbitol, xylitol and mannitol. They are lower in calories than sugars and starches but they are only one ingredient.

Just because something is "sugar free" doesn't mean that it is low in calories. Always read the nutritional labels to get the full story.

Tasty Tips

Sugar doesn't cause diabetes but it is a powerful carbohydrate.

Keep sweets out of the house and off of your desk and save them for celebrations. You'll save money and have a lot less to worry about when it comes to your diet.
